

HP Pavilion dv1000 Battery Replacement

Replace an old or failing battery in your HP Pavilion dv1000 series laptop.

Written By: John Park

INTRODUCTION

The HP Pavilion dv1000 series had a battery recall several years ago due to overheating batteries. This guide will show you how to replace your old battery with a new one.

The battery is the main source of power for your laptop. Without a battery, the laptop cannot be powered on unless it is plugged into a wall socket.

Replacing the battery is a very easy task with very little risk of damaging critical components inside your laptop.

Step 1 — Battery

- Shut down the computer.
- Disconnect all external devices and cables from the computer.

Step 2

- Flip the laptop over.

Step 3

- Locate the gray sliding tab next to the black bar where the battery is located.
- Slide the gray sliding tab to the left until you hear a distinct click.
- The inside edge of the battery should pop up.

Step 4

- Grasp the inside edge of the battery.
- Lift the inside edge of the battery up to detach the battery from the laptop.

To reassemble your device, follow these instructions in reverse order.
